

FORMOBILE is delighted to announce an event dedicated to sharing the project's results and demonstrating the benefits to LEAs and other relevant stakeholders. The event takes place online on 18th and 19th November 2021.

FORMOBILE is a European-funded project developing a complete end-to-end forensic investigation chain focused on mobile phones and striving to enhance digital safety and security in the EU. During the last 2.5 years, the FORMOBILE consortium has worked to achieve three main goals:

1. Develop advanced and innovative tools for collecting, retrieving, analysing and visualising data.
2. Create a standardised process consisting of best practices that support various elements of the mobile forensic chain.
3. Deliver a novel curriculum and training that equips security practitioners with the necessary knowledge and skills to implement all results.

To demonstrate these efforts, this **event showcases tangible examples** of how FORMOBILE benefits LEAs in practical scenarios.

The formula of the event includes an **applied demonstration of the solutions developed** so far. All examples link to a specific criminal case, exploring how FORMOBILE's results support the work of individual groups of practitioners throughout the investigation chain - **from mobile phone to court**.

This is a preview of what FORMOBILE will finally deliver in April 2022, the last month of the project implementation.

The event will **also include additional panels** related to **legal insights** in the Digital Forensic domain and a **roadmap of future mobile forensics** improvements.

We **encourage all representatives** connected to Mobile Forensics to join and participate in the event and to be updated with the current FORMOBILE achievements.

EU Agencies Relevant Networks
Prosecutors Public Institutions
Law Enforcement Agencies
Representatives of Police Schools
Judges **European Commission**

The preliminary agenda and registration link will be provided closer to the event date.
